Subject: RE: PCB Volumes

Ed and Carol. Please be patient with me but I have a quick question that you may have previously answered. Are there PCBs in the groundwater? If so, how many wells are affected and what concentrations have been found? I realize the answers are probably in the information you have already sent me, but I'm guessing it's just quicker for you to tell me the information rather than me hunting for it.

Thanks,

Jim

Subject: PCB Volumes

Jim,

As requested during our call on June 8th, we have calculated the volumes of soil at the Bethpage Community Park that are impacted with PCBs above the following concentrations:

- PCBs > 100 ppm – 2,400 cubic yards
- PCBs > 500 ppm – 550 cubic yards

These volumes were calculated using current soil sampling results and 3D environmental visualization software.

Please let me know if you require any additional information.

Thank You
